HONOURED | HISTORY + ICON UI

Three improvements. One milestone.

Objective: Prevent endless scrolling, keep the calendar and Contract page neat, and make older records and signed Icon revisions available only when users want to see them.

1. Seven-day History display

• Show session cards from the last seven calendar days (including today) by default.

• Tapping any coloured calendar date shows all records for that date, including multiple contracts; offer “Back to recent history” to restore the default.

• Preserve filters, statuses, card design, and all historical records. Never delete older entries.

2. Swipe between calendar months

• Swipe left for the next month; swipe right for the previous month.

• Retain the existing month arrows. Horizontal swipe must not interfere with vertical scrolling or tapping dates.

• Use a smooth horizontal month transition (~200–300 ms), if practical.

3. Tap Active Icon to show / hide revision history

• Default state: revision history collapsed; Active Icon details, today’s progress and green indicators remain visible.

• Tap the main Active Icon information area to expand all signed revisions directly below it; tap again to collapse. Add a subtle down/up chevron by the Icon title.

• **Action-link alignment (small layout refinement):** Move “End early” onto the same row as “Revise target”, right-aligned. Keep “Revise target” on the left. Both links sit **below and outside** the collapsible Active Icon summary and stay visible in either state.

• Preserve each link’s existing style, behaviour and confirmation safeguards. Tapping either link must **not** toggle revision history.

• Show original promise and every revision with original signatures, dates and details when expanded. Preserve immutable signed records.

• The revision confirmation message may remain temporarily visible; avoid permanent clutter.

Acceptance checks

Seven-day default; calendar dates reveal older records; month swipes and arrows work; Icon toggles history; action links align on one row and function independently; all signatures and records remain intact.

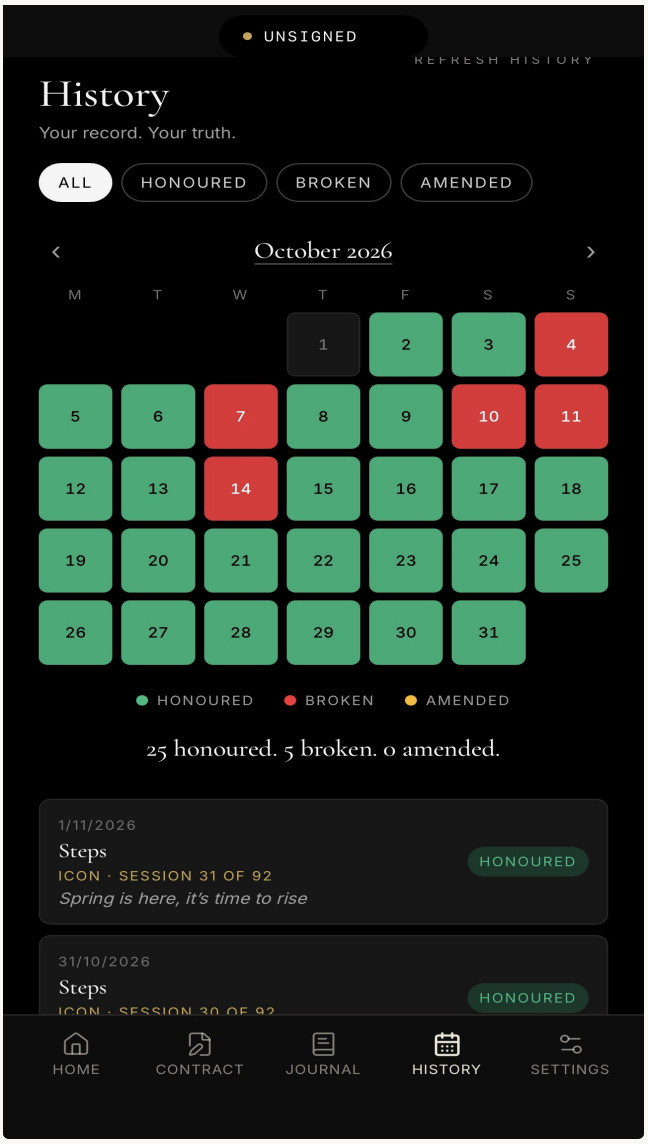

Indicative estimate

History + month swiping: 3–7 hours. Icon collapse: ~1–2 hours. Action-link alignment: **up to 1 hour**. **Total: ~4–10 hours**, subject to Jimmy’s review.

Pages 2–3 are visual references only. The action-link alignment above supersedes link placement in the Icon illustration. Preserve existing Honoured styling; no redesign requested.

VISUAL REFERENCE / EXISTING HISTORY SCREEN

Two behaviours, no visual redesign

1 LAST SEVEN DAYS

Cards below the calendar show only the past 7 calendar days by default.

Tap any coloured date to show that date's records instead. Include a "Back to recent history" control.

2 SWIPE THE MONTH

Swipe left: next month.

Swipe right: previous month.

Keep the existing chevron arrows. Do not interfere with vertical scroll or tapping a calendar date.

CALENDAR GESTURE

← **Swipe left = NEXT month**

→ **Swipe right = PREVIOUS month**

Swipe across the calendar grid; retain current styling and arrows.

Reference screenshot is the current interface. Annotations describe functionality only.

VISUAL REFERENCE | ACTIVE ICON + ACTION ALIGNMENT

Tap the Active Icon to expand or collapse history. Keep both action links on one row.

Visual guidance only. Revise target (left) and End early (right) remain independent actions.
